

## Remote Solar Farm Protection

# Cortex™ - Solar Plant Protection

Machine Vision Automates Wide Area Trespasser Detection  
Instant Notification and Alarm When Outer Zone is Breached

## Cortex™

### Correlation & Action Software

Automated surveillance, detection, annunciation and recording of trespassers is accomplished with elegant command, control and coordination.

From a single VFR™ radar and Chase camera to a multitude of radars, cameras and sensors.

Cortex™ pulls imagery and analytic data from the VFR™ radar and sends the Chase camera to point and zoom-in on the moving objects approaching the Solar Plant. The detected objects are placed on the display map. Video of the object and its location are pushed to security responders.

Cortex™ provides protection of the Solar Plant during construction by guarding the material at night and then serves diligently over the Plant's power generating life, alerting on trespassers.
